

Employee Onboarding Automation Proposal

Rule-based analysis produced by AVIP when no provider key is configured.

Automation Readiness	74%
AI Confidence	55%
Risk Level	Medium
Benchmark ROI	210%
Payback	9 months

Automation Opportunities

- This discovery project analyzes the organization's employee onboarding process, including document collection, account provisioning, training enrollment, and approval workflows - AI
- The objective is to identify repetitive manual tasks, improve onboarding efficiency, reduce processing time, and evaluate the feasibility of implementing workflow automation and AI-powered document verification - Workflow
- Analyze the current onboarding process to identify manual activities, bottlenecks, and automation - AI
- Employee uploads required documents (ID, address, education, tax forms, bank details) - RPA
- HR reviews exceptions and approves - Human Only
- IT provisions email, laptop, VPN, and application accounts - Workflow
- Employee onboarding completed and dashboard updated - RPA

Recommended Stack

- RPA
- OCR
- LLM
- Workflow
- Human Approval

KPIs

Risks

- Operational risk from manual dependency
- Compliance risk if approvals are bypassed
- Security risk for document handling
- Model hallucination risk on ambiguous inputs
- Business continuity risk if systems are unavailable

Mitigations

- Human approval for high-value cases
- Audit logs and traceability
- Confidence thresholds for AI outputs
- Secure local file storage with access control
